Nicholas Persinger

Senior Quantitative Analyst & Financial Software Engineer | MS Math & MS Finance | Healthcare Systems, Algorithmic Engineering & Financial Technology
United States

Summary

Hello World!I’m a Senior Software Engineer who views building software as a team sport. To me, the best code isn't just fast or clever—it’s the code that reliably solves real problems for people.Over the years, I’ve paired my background in Computer Science with advanced degrees in Mathematics and Finance. This combination gives me a deep appreciation for the complex logic behind modern systems—especially in healthcare and financial tech, where accuracy and uptime matter most.Here is how I like to approach my work: I focus on the "why": Whether I’m working through healthcare payment flows, claims logic, or backend data pipelines, I care deeply about how the business logic connects to the actual product.I build for reliability: In healthtech, software directly affects people's lives and financial well-being. I push to ship features quickly, but never at the expense of system stability.I collaborate across disciplines: I spend a lot of my day talking with product, data, and design teammates to make sure we aren't just writing code, but actually solving the right problem.Beyond individual contributions, I love helping simplify tricky architectures, mentoring teammates, and helping the whole team build momentum together.I’m always open to connecting with teams that take pride in their craft, solve interesting domain problems, and care about shipping great work. Let’s connect!

Experience

Curative
Senior Quantitative Software Engineer
July 2025 - June 2026 (1 year)

Lloyd's Group
Financial Software Engineer
May 2022 - May 2025 (3 years 1 month)

EPAM Systems

Full Stack Engineer

June 2019 - April 2022 (2 years 11 months)

Developed full-stack web applications utilizing React, Python, and SQL databases, focusing on scalable SaaS solutions for enterprise clients

Built RESTful APIs with FastAPI to support frontend features, ensuring secure data transactions and optimized performance

Implemented automated testing pipelines with CI/CD, improving release reliability and reducing manual QA efforts

Collaborated with product teams to design user-centric interfaces, enhancing usability and operational workflows

Supported production environments by debugging, optimizing database queries, and maintaining high data quality standards

Education

The College of Saint Rose

Master of Science · (May 2023)

Wayne State University

Master of Science, Finance, General · (2023 - 2026)

The College of Saint Rose

Bachelor of Science · (August 2015 - May 2019)
